

## Meeting Room Solutions

Sudlows' meeting room solutions allow for improved collaboration, communication and productivity.

Sudlows design and deploy meeting room solutions that fully capture the requirements of our customers. Our AV Designers can modernise your meeting space by providing robust and adaptable solutions in a range of room types including town halls, boardrooms, meeting spaces, breakout rooms and huddle spaces

Room booking systems, video conferencing, room controls and wireless presenting are all ways to enhance your meeting spaces.

## Unified Communications & Video Conferencing

Remote working is favoured by an increasing number of organisations, driving the demand for communication platforms that make virtual meetings and collaboration central to meeting room solutions.

Unified Communications and Video Conferencing (UC & VC) allow teams to work together on documents and projects that previously required in-person meetings. This technology greatly improves meeting room usability while reducing costs through the efficiencies of remote collaboration.

## Event Spaces

Reliable and efficient event space solutions and technology are key to hosting any event in the workplace.

Our event space solutions include speakers, microphones, lighting and PA systems, all from a portfolio of the choice audio visual manufacturers.

Whether it is for an auditorium, lecture theatre, or multi-purpose space, Sudlows' event space solutions are fully scalable to your event space and deliver an exceptional audio and visual experience to your audience or guests.

## Smart Workplace Management

We aim to ensure every user enjoys the best possible experience from our AV installations. Assisted hearing systems make spaces accessible for people with hearing loss by transmitting audio directly to hearing aids or headsets, eliminating background noise and distortion.

When designing hearing loop solutions, we guide clients through the full range of options available and work closely with them to ensure the chosen system meets the needs of the space and its users.

## Background Music & Public Address

Background music and public address (PA) systems are widely used in healthcare, hospitality, offices, and distribution centres to deliver clear communication and create the right atmosphere. PA systems can quickly broadcast messages to large groups and can easily double as background music systems with the addition of a music server.

Designing an effective solution involves considering microphone and touch-panel locations, zoning requirements, and overall coverage. These systems are highly customisable, and our Smart Technology Team can survey your space and recommend the ideal setup for your business.

## Digital Signage

Digital signage is transforming corporate, education, and healthcare environments by delivering eye-catching, targeted messages to staff and visitors, providing information and way-finding. It enables instant communication, reduces reliance on printed materials, and offers a sustainable solution with long-term return on investment.

Sudlows partners with leading digital signage manufacturers to deliver high-quality display solutions ranging from single screens to large-scale signage networks and video walls.

## Assisted Hearing

We aim to ensure every user enjoys the best possible experience from our AV installations. Assisted hearing systems make spaces accessible for people with hearing loss by transmitting audio directly to hearing aids or headsets, eliminating background noise and distortion.

When designing hearing loop solutions, we guide clients through the full range of options available and work closely with them to ensure the chosen system meets the needs of the space and its users.

## Collaboration Solutions

Modern workplaces can collaborate from virtually anywhere with the right tools in place. Our solutions enable teams to collaborate seamlessly.

Sudlows partners with leading collaboration technology providers to deliver a wide range of cutting-edge, flexible options. Our Audio Visual experts assess your environment and recommend the ideal setup to create the most effective collaboration experience for your organisation.
