

CONNECTED CHARGING FOR ELECTRIC VEHICLES ACROSS EUROPE.

SWARCO E.CONNECT

WELCOME TO SWARCO E.CONNECT

Europe's First Cross Continent Electric Vehicle Recharging Network

We offer you an accessible, reliable, market leading back office solution. SWARCO E.CONNECT is a pan-European electric vehicle (EV) recharging network that accommodates both eVot and third party EV Charging Stations.

It's completely free for EV drivers to join SWARCO E.CONNECT online or via the mobile app. With no connection fees for Charging, drivers have access to all public Charge Points on the network throughout the whole of Europe.

The location and live status of all Charging Points can be seen online or via the app. The helpful journey planner feature shows drivers all available Charge Points, so planning any recharges along the way is simple.

WHY JOIN OUR NETWORK.

SWARCO E.CONNECT can be integrated into existing parking management systems while incorporating fault management processes so that historic Charge Point technical issues can be viewed online. Sophisticated analytics and advanced reporting tools enable Charge Point owners to assess the environmental impact. Automated usage statistics are also delivered in a weekly report.

Compatible with all OCPP-compliant Charge Point manufacturers and service companies, SWARCO E.CONNECT ensures the most efficient uptime across its network, with automatic and instant fault reporting. With 24/7 365 days a year customer support for Charge Point owners and EV drivers, any issues are addressed without fuss or delay.

Compliant with OCPP versions 1.5+ & 1.6 and fully integrated with utility providers for unmetered supplies, i.e. for lamp post charging.

SWARCO E.CONNECT also integrates with current SWARCO applications including parking barriers, traffic guidance systems and ANPR platforms. This allows seamless customer interaction between parking and Charging.

With a commitment to continuous development, including future integration with other SWARCO group products and services, we will ensure our network is future proofed.

THE COMPLETE ELECTRIC VEHICLE CHARGING SOLUTION.

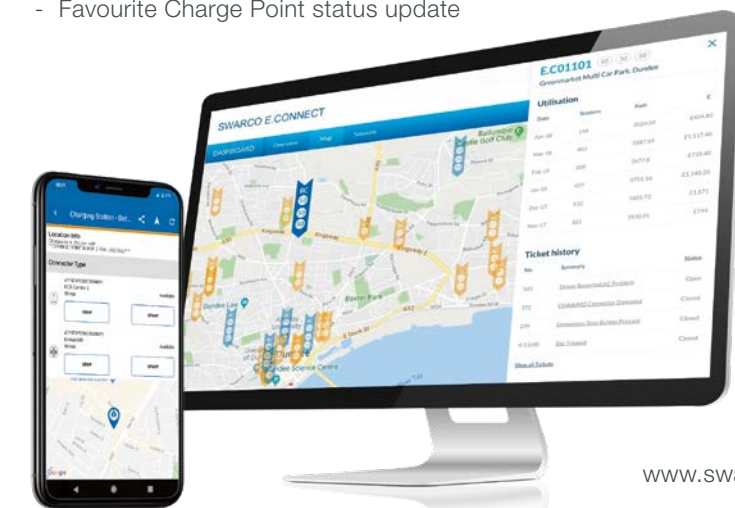

Charge Point Owners

- Advanced reporting tools including figures on environmental impact
- Usage statistics and reports delivered weekly
- Fleet monitoring services
- Incorporated fault management process, with visibility on all historic issues
- Integration with existing parking systems
